

CSC311 - Use of Large Language Model by Maria Shurui Ma (1009054924)

1. Which model did you use?

I used Github Copilot and ChatGPT4 during the completion of this assignment.

2. What prompts did you run the model with?

For Github Copilot, I used it as an aid for typing LaTeX code. When I am typing long and complex equations, it helps me with the autocomplete feature. In addition, it helped me with math and document formatting.

For ChatGPT4, I used the prompts “can you explain to me the MLE estimator and how to derive it?”, “can you explain to me the MAP estimator and how to derive it?”, and “how to use $np.logaddexp$ to ensure numerical stability?”?
